Bureau of Land Management**

Fisheries Biologist

Make a Career of It!

If you enjoy the outdoors and interacting with the natural world, this wet and wild job might be for you!

Bureau of Land Management (BLM) fisheries biologists study and collect data on fish and aquatic habitats of all kinds, but primarily fresh water environments. They maintain, restore, and conserve fish habitat on public lands to ensure healthy fish populations and prime recreational opportunities for fishing enthusiasts. Teaming up with other BLM scientists, fisheries biologists provide information on aquatic species and habitats to land managers for use in making sound land use decisions. It is through the work of fisheries biologists that waterways on the public lands remain healthy and productive.
