Herd Management Areas (HMA) and Herd Areas (HA) have been placed in separate tables by state.

The population estimation method used on the majority of HMAs is the simultaneous double count method.

Most of the 177 HMAs have been counted with this method. Ground counts are still done on smaller areas where animals are easier to identify.

Populations do not reflect any changes after March 1, 2020 (i.e. foal crops or gathers).

BLM policy is to establish Appropriate Management Levels (AML) as a range with upper and lower levels.

Acres have been calculated using current digitized (GIS) maps using the UTM (Universal Transverse Mercator) projections.

Acreage transferred from BLM to another agency are not deducted from the HA acreage.

HA acreage totals are calculated based on designations made in the early 1970's.

1. Appropriate Management Levels, indicates estimated AML.
2. High End AML is reported as the maximum number of animals sustainable on a yearlong basis.
3. Most Recent Year @ AML is the last time AML was achieved on the HMA.
4. Three Rivers Complex - AML-509; includes Alamo, Big Sandy, Havasu HMAs.
5. % of AML: If estimated population is above High AML, this value is the estimated population divided by the High AML (as a percentage of High AML). If estimated population is below Low AML, this value is the estimated population divided by the Low AML (as a percentage of Low AML). "Within AML" means that the estimate is between Low AML and High AML.

1. High End AML is reported as the maximum number of animals sustainable on a yearlong basis.
2. Most Recent Year @ AML is the last time AML was achieved on the HMA.
3. % of AML: If estimated population is above High AML, this value is the estimated population divided by the High AML (as a percentage of High AML). If estimated population is below Low AML, this value is the estimated population divided by the Low AML (as a percentage of Low AML). "Within AML" means that the estimate is between Low AML and High AML.
