Herd Management Areas (HMA) and Herd Areas (HA) have been placed in separate tables by state.

The population estimation method used for the last two years on most HMAs is the simultaneous double count method.

Two thirds of the 179 HMAs have been counted with this method. Plans are to count the remaining uncounted HMAs next Fiscal Year.

Populations do not reflect any changes after March 1, 2015 (i.e. foal crops or gathers).

BLM policy is to establish Appropriate Management Levels (AML) as a range with upper and lower levels.

Acres have been calculated using current digitized (GIS) maps using the UTM (Universal Transverse Mercator) projections.

Acres transferred from BLM to another agency are not deducted from the HA acreage.

HA acreage totals are calculated based on designations made in the early 1970's.

3. Most Recent Year @ AML is the last time AML was achieved on the HMA.
4. Three Rivers Complex - AML-509; includes Alamo, Big Sandy, Havasu HMAs.
5. % of AML: If estimated population is above High AML, this value is the estimated population divided by the High AML (as a percentage of High AML). If estimated population is below Low AML, this value is the estimated population divided by the Low AML (as a percentage of Low AML). "Within AML" means that the estimate is between Low AML and High AML.
8. Populations estimate in Cibola-Trigo were incomplete due to military flight restrictions.

3. % of AML: If estimated population is above High AML, this value is the estimated population divided by the High AML (as a percentage of High AML). If estimated population is below Low AML, this value is the estimated population divided by the Low AML (as a percentage of Low AML). "Within AML" means that the estimate is between Low AML and High AML.
