Cactus of Grand Staircase-Escalante

Marc Coles-Ritchie & Jared Higgs

Marc is BLM Ecologist at Grand Staircase-Escalante National Monument

Jared is a botany consultant and cactus expert based in Price, Utah

Kanab Public Library January 2025 Photos by authors unless otherwise noted

Recognizing Indigenous People and Knowledge

- Tribes with connection to this land include
 - Southern Paiute
 - Hopi
 - Zuni
 - Pueblo
 - Dine' (Navajo)
 - Ute
 - others
- Indigenous people lived off this land.
- Indigenous knowledge holders knew and know the many uses of plants.

Flora of Grand Staircase-Escalante National Monument

- 1,003 species
- 26% of plants of Utah are in GSENM
- At least 43 endemic plants (grow nowhere else)
- Past talks at Kanab Library (pdf's available)
 - Flora: Wildflowers, Grasses, Shrubs, Lichens
 - Cultural Site Stewardship, Wildlife
- Upcoming talks at Kanab Library
 - Flora: Riparian plants, Landscaping with native plants
 - Bighorn sheep, bumblebees, dinosaurs
 - ?

Cactus sampler

Cactus family: Cactaceae

Where

- Americas, from Patagonia to Canada
- Dry places

Characteristics

- No true leaves
- Spines, both large and small
- Stems (or pads or joints) photosynthesize
 - often ribbed or pleated
- Succulent, to conserve water, can expand or contract
 - some shrink to below ground surface!

Cultural and economic importance

Tallest Cactus

"Mexican giant cardon" (*Pachycereus pringlei*), with a maximum recorded height of 63 feet.

Genera in Cactus Family

- Pricklypear (*Opuntia*)
- Cholla (Cylindropuntia)
- Hedgehog & Claretcup (Echinocerus)
- Fishhook (Sclerocactus)
- Pincushion (*Pelecyphora/Escobaria*)
- Snowball cactus (Pediocactus)

Glochids

hair-like spines or short prickles, generally barbed, found at base of spine clusters in the pricklypears and cholla

Pricklypear (Opuntia)

- Stems: <u>"pads" that are jointed, flat and</u> <u>round</u>; pads (leaves) fleshy and edible
- Glochids: small but very sharp, detachable and barbed
- Spines: 1 or more stout spines (a few are spineless)
- Flowers: various colors (yellow, pink, purple, red)
- Fruits: dry or fleshy prickly pears, sometimes with smaller spines
- Size: 3" to 4' tall; occasionally can be much taller

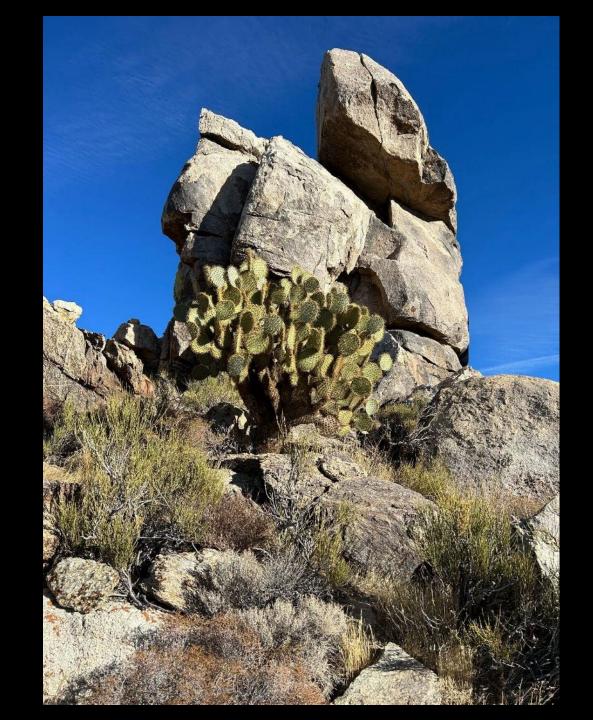

So many hybrids!

7-foot tall prickly pear (*Opuntia chlorotica*)!

Mojave National Preserve (California)

Cholla (Cylindropuntia)

- Stems: <u>cylindrical, many</u> <u>branches</u>
- Glochids: Yes in various arrangements
- Spines: typically present
- Flowers: yellow to red
- Fruits: various
- Size: <u>4-5 feet or to 7 feet tall</u>

Hedgehog (Echinocereus)

- Stems: 1 to many rounded to cylindrical stems; can <u>form clump</u>
- Glochids: none
- Spines: straight (not hooked)
- Flowers: <u>red or pink (can be</u> <u>many)</u>
- Fruits: have spines, seeds small ~1mm
- Size: 3-12" tall x 12" diameter clump

Fishhook (Sclerocactus)

- Stems: mostly single, round to cylindrical, stout
- Glochids: none
- Spines: <u>fishhook</u> on end of central spines; lateral spines not hooked, can be different colors
- Flowers: rose pink to violet (can be yellow/white); born on apex
- Fruits: spineless, seeds several mm wide
- Size: usually to 10" tall and 5" wide

Foxtail (*Pelecyphora/Escobaria*)

- Stems: single or clump, <u>round</u>
- Glochids: none
- Spines: straight (not hooked) and short (less than 1 inch long)
- Flowers: pink, yellow, white, green, or brown
- Fruits: red, green or brown
- Size: <u>a few inches to a foot tall</u>

Species of Cactus in Grand Staircase-Escalante

Pricklypear (*Opuntia*): 5 species
Cholla (*Cylindropuntia*): 1 species
Hedgehog/Claret Cup (*Echinocereus*): 2 species
Fishhook (*Sclerocatus*): 1 species
Foxtail (*Pelecyphora*): 2 species
Ball cactus (*Pediocactus*): 1 species

Pricklypear (Opuntia)

• <u>golden pricklypear</u> (*Opuntia aurea*): no spines, bluish color, green stigma

<u>brittle pricklypear</u> (*Opuntia fragilis*): small round pads

golden pricklypear (Opuntia aurea)

brittle pricklypear (*Opuntia fragilis*)

Pricklypear (*Opuntia*) continued

 <u>twistspine pricklypear (Opuntia macrorhiza):</u> <u>medium sized pads, wet fruited</u>, yellow flowers with red center, often somewhat flabby, <u>widely spaced spine clusters</u>

 <u>Navajo Bridge pricklypear</u> (*Opuntia nicholii*): dry fruited, <u>small to medium sized pads</u>, yellow, orange, pink, red flowers, <u>closely</u> <u>spaced spine clusters</u>

twistspine pricklypear (Opuntia macrorhiza)

Navajo Bridge pricklypear (Opuntia nicholii)

Pricklypear (Opuntia) continued

<u>tulip pricklypear</u> (*Opuntia phaeacantha*): <u>large pads</u>, <u>wet</u>
 <u>fruited</u>

ladyliatris

tulip pricklypear (Opuntia phaeacantha)

Whipple cholla (Cylindropuntia whipplei)

- Stems: cylindrical, <u>cigar shaped</u>
- Flowers: <u>yellow</u>
- Fruits: fleshy and drying after two years
- Size: <u>1-7 feet tall</u>

Engelmann's hedgehog cactus (*Echinocereus engelmannii*)

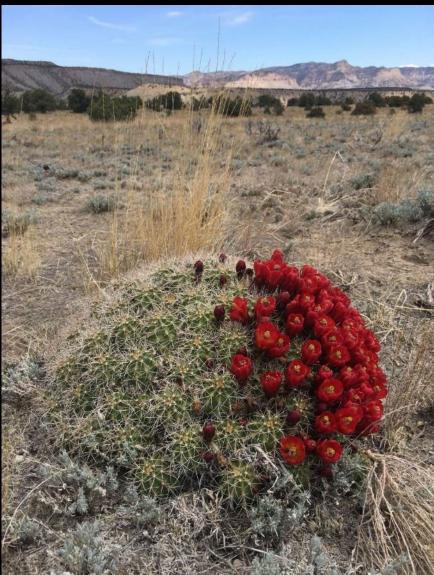

- Stems: <u>1 to a few, loosely</u> <u>clustered</u>, ribs 10-13
- Spines: of different thicknesses
- Flowers: <u>pink</u>
- Fruits: with spines, seeds small ~1mm
- Size: 3-12" tall and 2-4" thick

Mojave claret cup cactus (Echinocereus mojavensis)

- Stems: 1 to many, rounded to cylindrical, <u>often</u> with many stems forming a mound, ribs 9-10
- Spines: of same thickness
- Flowers: <u>red</u>
- Fruits: with spines, seeds small ~1mm
- Size: mostly 3-10" tall and 12" wide

Smallflower fishhook cactus (Sclerocactus parviflorus)

- Stems: round to cylindrical, stout, ribs 13
- Spines: <u>typically with a fishhook on the end of</u> <u>the central spines</u>, 8-17 radial spines, 4-6 central spines
- Flowers: rose pink to violet to yellow/white; born on apex
- Fruits: spineless, seeds several mm wide
- Size: usually to 10" tall and 5" wide

Smallflower fishhook cactus (Sclerocactus parviflorus)

photos of Andrey Zharkikh

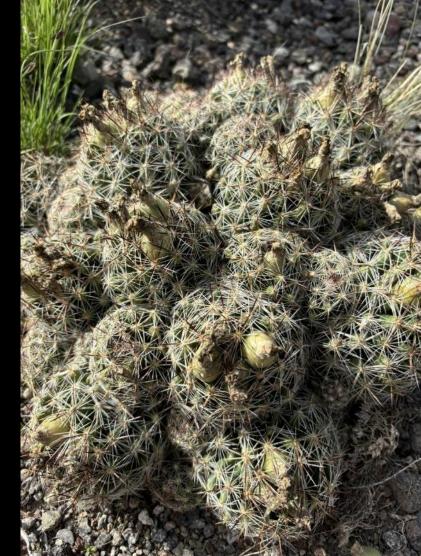

Spinystar (Pelecyphora vivipara)

- Stems: 1 to many, <u>projection</u> <u>holding spine cluster with</u> <u>groove on one side</u> (use a stick)
- Spines: 3-12 central spines, 12-20 radial
- Flowers: pink with <u>very pointed</u> <u>petals</u>
- Fruits: olive sized, green to reddish
- Size: <u>a few inches to 1 foot tall</u>

Missouri foxtail cactus (Pelecyphora missouriensis)

- Stems: round and flattened, usually solitary
- Spines: not obscuring the stem
- Flowers: <u>yellow-ish</u>
- Fruits: bright red, pea sized
- Size: <u>1-3 inches wide</u>

Mountain ball cactus (Pediocactus simpsonii)

- Stems: 1 to several, <u>spherical</u> with the flattened top, projection holding spine cluster with no groove
- Spines: 4-10 central spines, 10-25 radials
- Flowers: white, pink, yellow
- Fruits: small
- Size: 1-6" tall, 1-8" wide

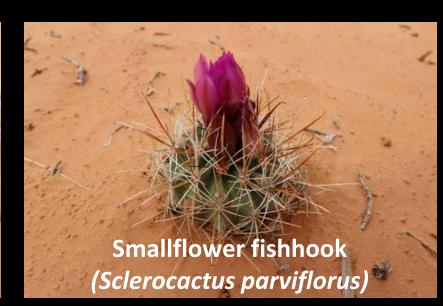

Test time!

Mojave claret cup (Echinocereus mojavensis)

Pricklypear (Opuntia)

Whipple cholla (Cylindropuntia whipplei)

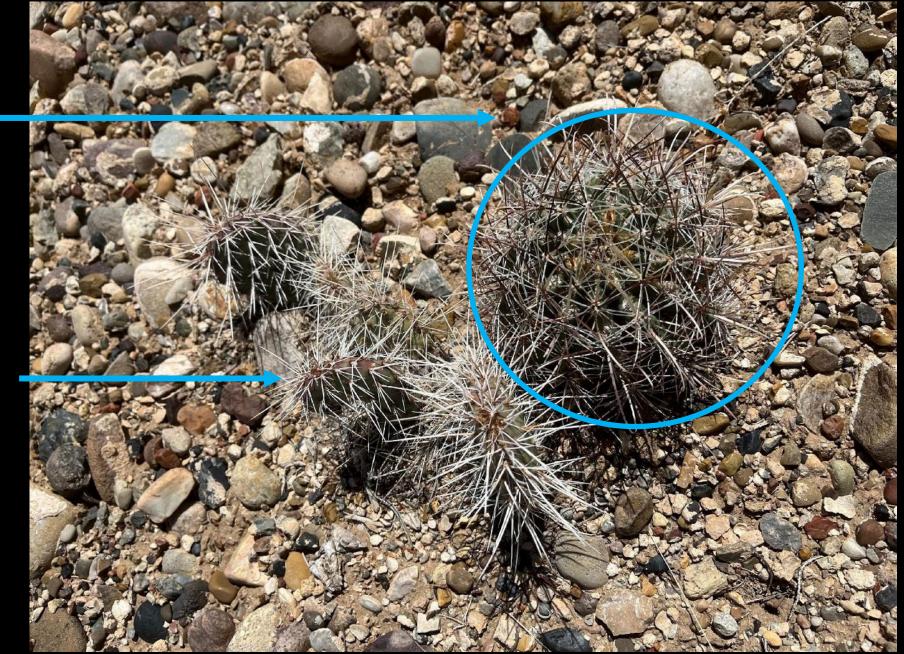

Pricklypear (Opuntia)

Anything familiar?

Fishhook cactus (*Sclerocactus*)

&

Pricklypear (Opuntia)

Growing Cactus- Propagation

Cuttings- Opuntia, Cylindropuntia

Seeds- Echinocereus (easy), Sclerocactus (hard), Pediocactus (medium)

• *Mesa Garden*- huge variety of seeds including rare and endangered species

Plants- just buy a plant? They do much better!

- <u>Geoscape Nursery (Idaho)</u>- ethical collection of many Opuntia, Cylindropuntia, Echinocereus, etc.
- <u>Cold Hardy Cactus (Colorado)</u>- most popular but expensive cactus nursery
- <u>Cistus Nursery (Oregon)</u>- variety of interesting collections of Opuntia and Cylindropuntia.
- Intermountain Cactus (Utah)- Local and nice.

Growing Cactus- Cultivation

- ****Why would you grow something from thousands of miles away when we have amazing plants in our backyards!****
- Mimicking the habitat of the plant not always a 1:1
- General cactus mix should be well draining (plenty of gritty material).
 - Sclerocactus, Echinocereus englemanii, Pediocactus- Use Ralph Peters mix of 25% ¼" red lava rock/pumice, 25% sandy loam, 50% builders sand
 - Opuntia, Cylindropuntia, Echinocereus mojavensis, Escobaria vivipara- Use R.P.'s mix or if in an area with less than 12" rain/year can add more organics to retain more moisture.

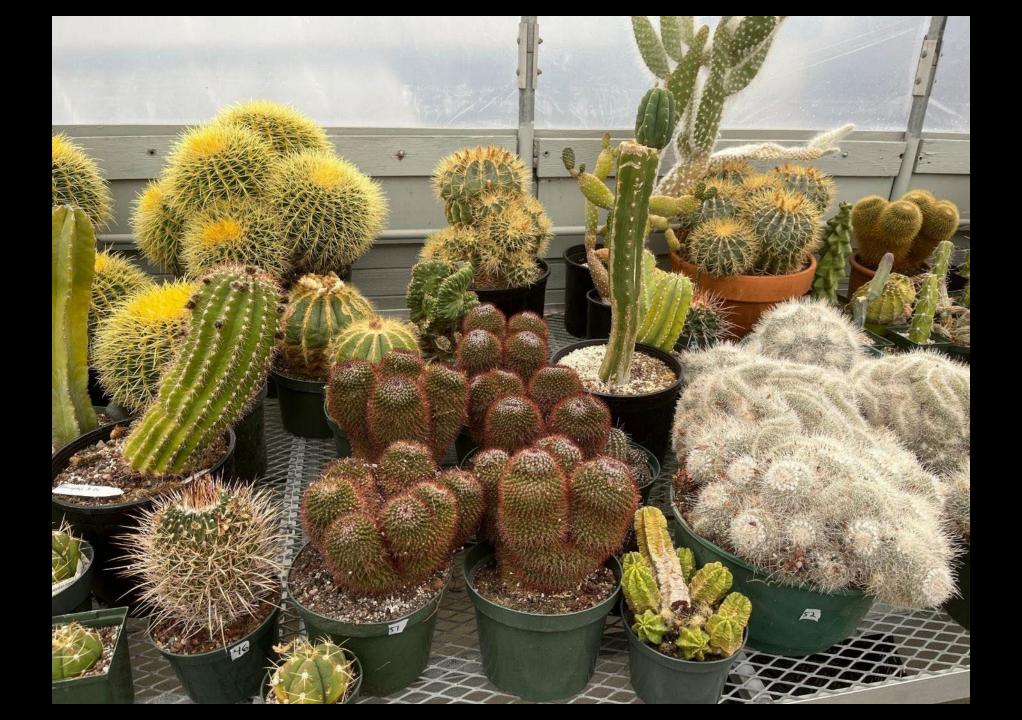

Growing Cactus- Cultivation from Seed

Very rewarding and informative

Chance to see what you might not see in nature

Easy easy easy Collecting???

Ethics of Cactus Growing

Poaching is a big problem.... International trade... Ignorance....

Question: How do I know if collected ethically?

- Hard to know with many species
- Best way to know is to go to good sources!!!!

Question: Can I take cuttings of cactus for myself in the wild?

 In some cases but..... land ownership? Permits? Ethical? Someone already legally collected a plant that is better, easy to obtain.

Question: Should I dig this up?

• Never!!!

Mesa Garden sells seeds and plants of common, rare, and endangered species.
